

Mgr. Andrej Farkaš – critical voice of Matfyz

Who am I?

Student of doctoral studies in physics. I play with lasers that go pew-pew at the new materials which you might once meet in your computer.

I am also a member of the Academic Senate, where I am involved in IT as a presiding member of the IT committee. I am also interested in questions regarding KaM, our university's financing, and many other topics.

My thesis in 15 seconds:

New SIS (yes, really)

Effective spending and fundraising at our university

Stop the steep increase of food prices in Menza from 1.1.2023

Investments into dormitories – reconstructions and new capacity

Popularization and support of Kampus Hybernská

If you want to know more:

It is true, and we will have a new SIS, thanks to my work on the IT committee. If you want to know more, look at the committee [records](#).

Unfortunately, money is handled poorly, so I am trying to create a systematic approach for distributing funding at our university. Check out the records from [the Senate](#) or [Economic committee](#) to learn more.

Food in Menza will get more expensive from 1.1.23 (20 Kč for soup and 100-110 Kč for a meal). I have managed to create a discussion about it, and I will keep you posted.

Dormitories deserve to be reconstructed and also expanded with new capacity. Expansion is currently not planned, which I would like to change.

Have you ever visited Kampus Hybernská? If not, you should check their rich program. I want to continue as a member of the programming committee.

Ask me more and write me an e-mail!
