

HEI4Future

Entrepreneurial and innovation skills
for developing the new value chains of
mobility, health and manufacturing

It's time to take up the challenge.

Supported by

UrbanMobility

Funded by the
European Union

Hackathon4Future

Innovative solutions 4 challenging times

We need innovative minds like yours to hack our future and disrupt existing markets.

The challenge

Many EU countries are slowly emerging from COVID-19 and are forced to face the harsh realities of a world with a war in Ukraine driving up food prices and contributing to skyrocketing energy prices, accelerating a global economic and financial crisis.

- Do you have an idea to meet these challenges?
- Are you interested in whether your idea has real business potential?

Then come to the Hackathon4Future and discuss your idea with peers and our expert mentors

What can you expect?

Hackathon4Future supports teams and idea holders to solve the most pressing challenges of our time in the fields of urban mobility, health and manufacturing. The best teams will be selected for a full business mentoring programme starting in 2023 to support them in designing and launching their start-up.
