

Statement related to predator journals

The head of the School of Mathematics and the Council of the Cooperatio Mathematics discussed publishing in the so-called predatory journals and journals that are "almost" predatory. The web page <https://beallslit.net/> probably does not contains all suspicious publisher. A good indication is the article processing charge (APC), advertised short time reviews (in days) and very short publication time, e.g. MDPI or HINDAWI publishers. Therefore, we recommend to all staff **NOT to cooperate** in any way **with those publishers** (board membership, review and publication activity).

For the Council and SM,
Vit Dolejsi
